Welcome to

Faraday Anywhere Live

The center of your portable lifestyle.

1. Installing Faraday Anywhere:

To install Faraday Anywhere Live, you must first copy all of the files [except this one] into the main folder of your calculator.

1.1 For People that do not already have a copy of Faraday:

- First, type `install()` at the Home Screen and press `[ENTER]`
- Then follow the on-screen instructions.

1.2 For People that have Faraday Anywhere 3.0 or higher
- Start Faraday.
- Access the console at the desktop by pressing `[<>][F5]`
- Assuming you are in folder MAIN, type `install`

2. Using Faraday Anywhere Live:

To start Faraday, access the Home Screen and press `[<>][1]`

You will then be greeted with the boot screen, which displays some information about your system and a boot logo. This will be on your screen for 3.5 seconds. If you have a sound system attached, there will be a short beep at the beginning of the startup sequence.

After boot sequence, you will see the display manager, where you will log in to Faraday Anywhere. Select the username you made for yourself during the install process.

2.1 Switchboard
One of the 'new' features you will notice is that the Application Workspace has been replaced by the Switchboard. I have modeled the Switchboard after AW to minimize confusion.

There have been a few changes to the structure of the Faraday Anywhere desktop. First, the function keys are no longer used to select the icons. Now, one must use the arrow keys to select the icons. DO NOT HIT UP FIRST OR YOU WILL HAVE TO RESTART FARADAY. You must go down from the top first then press up as the icon selection is integer based.

2.2 The File Browser
The File Browser is the new version of mycalc.PRGM that is based on Fronting [the way Faraday Anywhere BASIC Applications render their windows].

Using this fine application.. heh
When the program first starts, you will be presented with the folder list. To select a folder press [DOWN] or [UP]. To enter the folder press [RIGHT] NEVER [ENTER]!

After entering the folder selecting the files is done the same way except that to view the file information you can then press [ENTER].

If the program is a .PRGM or .ASM file, you may press enter at the file information screen to execute it.
If it isn't, it will run the last .PRGM or .ASM file that was run.

Press [LEFT] to exit the file information and the file list.

Exit the File Browser by pressing [2ND][ESC] at any screen.

[2ND]+[UP] or [DOWN] scrolls list by 6
[<>]+[UP] or [DOWN] jumps to the top or bottom of the file list

2.3 Shut Down at Switchboard only
To turn off you calculator, turn it off as you normally would. [2ND]+[ON]
To quit Faraday press [2ND]+[ESC]

3. Miscellaneous Stuff

Press [<>]+[F5] For Console
Press [<>]+[F4] For System Preferences
Press [<>]+[F3] For Screen Saver
