

This keyboard map can be used to replace the standard maps for the emulation of the TI92, TI92 plus or Voyage 200 PLT included with TIEmu 3.02 or higher on computers with spanish keyboards.

You should change the name from “V200 mapa modificado para teclado en español.map” to 92.map or V200plt.map, depending on your specific emulation, and replace the corresponding file on your TIEmu directory before running the emulator.
